

Dual Grit Alumina Sharpening Stone

This alumina sharpening stone is a dual-grit abrasive tool for sharpening knives and tools. It features a coarse grit for initial sharpening and a fine grit for honing and polishing.

Overview

Professional Dual-Grit Sharpening Solution

This high-quality alumina sharpening stone is a versatile abrasive tool engineered for maintaining knives, tools, and various cutting implements. It features a dual-grit design that combines a coarse surface for initial sharpening and a fine surface for precision honing and polishing. Made from durable alumina abrasive, it ensures efficient material removal and long-lasting performance for both professional and home applications.

Technical Specifications

Grit Type

Dual-Grit • Coarse (Repairing) • Fine (Honing)

Abrasive Material

High-quality Alumina

Form Factor

Rectangular

Key Features

Core Functionalities

- Dual-surface design for multi-stage sharpening
- Efficient material removal for correcting blade imperfections
- Fine grit surface for achieving a razor-sharp finish
- Stable rectangular profile for various blade sizes
- High durability alumina construction

Applications

Recommended Applications

Knives, Hand Tools, Cutting Implements, Professional Workshop, Home Kitchen
