

Dual Grit Sharpening Stone

This dual-grit sharpening stone is designed for honing and sharpening blades. One side features a coarser grit for initial shaping, while the other offers a finer grit for refining the edge.

Product Overview

Precision Sharpening Solutions

These professional-grade sharpening stones are engineered from high-quality abrasives and a vitrified bond to ensure long-lasting performance. Featuring a versatile dual-grit design, these stones allow users to transition seamlessly from aggressive material removal for sharpening to precise honing and lapping for a razor-sharp finish. They are essential tools for maintaining the edge quality of knives, industrial blades, and various cutting implements.

Technical Specifications

Available Forms

- Single sharpening stone
- Combination sharpening stone
- Irregular sharpening stone

Construction	Dual-layer vitrified bond
Applications	Sharpening, Lapping, Honing
Material Composition	High-quality abrasive grains with vitrified bonding
