

Dual Head Metal Cutting and Bending Machine

This double-head cutting machine is designed for precise and efficient cutting and fold-bending operations. The machine features dual cutting heads for simultaneous processing and adjustable cutting angles for versatile applications.

Overview

High-Precision Dual Head Processing

This Dual Head Metal Cutting and Bending Machine is engineered for professional metalworking environments requiring both precision and efficiency. Featuring dual cutting heads, it allows for simultaneous processing, significantly increasing productivity for industrial cutting and fold-bending operations. Its robust construction ensures long-term stability and durability, making it an ideal solution for demanding metal forming and shearing tasks.

Technical Specifications

Key Processing Features

- Dual cutting heads for simultaneous processing
- Adjustable cutting angles for versatile applications
- Robust construction for enhanced stability
- User-friendly control interface

Model Number	LJZ2-450x3600
Core Capabilities	Metal Cutting, Fold-Bending, Shearing, Metal Forming
