

Dual-Head Paper Processing Machine

This paper processing machine is designed for industrial use. It utilizes a dual-head design with pneumatic cylinders and a digital control panel for precise control.

Overview

Dual-Head Industrial Processing

The Dual-Head Paper Processing Machine is a robust, industrial-grade solution engineered for high-efficiency paper product manufacturing. Featuring a specialized dual-head design with advanced pneumatic cylinders, this equipment ensures precise pressing, sealing, or cutting operations. With an integrated digital control panel, operators can maintain consistent quality and exact functionality, making it a reliable asset for demanding production environments.

Technical Specifications

Model Identifier	ZB-12
Machine Type	Dual-Head Paper Processing
Operation Method	Pneumatic, Digital Control

Key Features

Core Capabilities

- Dual-head processing configuration
- Pneumatic cylinder actuation
- Digital control panel interface
- Industrial-grade enclosed cabinet construction
