

Dual-Lamp Analytical Instrument

This experimental analytical instrument features a dual-lamp configuration mounted on a circular base. Each lamp is housed in a cylindrical casing and is adjustable via a swivel mechanism.

Product Overview

Dual-Lamp Analytical Instrument

This specialized analytical instrument is engineered for precision laboratory or industrial applications. Featuring a robust dual-lamp configuration, the device offers adjustable positioning via swivel mechanisms for optimal light direction. Its durable metallic construction and wall-mountable base design ensure stability and reliability in demanding analytical environments.

Technical Specifications

Lamp Configuration	Dual-lamp system
Adjustment Mechanism	Swivel mechanism, Adjustable

Design & Build

Construction	Durable • Industrial Grade
Mounting Type	Wall mount
Finish	Metallic
