

Dual Mast Aluminum Aerial Lift

This double-mast lifting platform is made using high-strength aluminum alloy. It is lightweight, compact, and provides a stable lift for operation at different heights.

Product Overview

Dual Mast Aluminum Aerial Lift

This dual-mast lifting platform is constructed from high-strength aluminum alloy, offering a perfect balance of lightweight portability and robust durability. Designed for safety and reliability, it features a compact footprint that allows for easy maneuverability in confined spaces such as factories, hotels, and airports. Equipped with a safety cage, outriggers for stability, and precise electric motor controls, it serves as an essential partner for equipment maintenance, lighting installation, and cleaning tasks.

Technical Specifications

Load Capacity

250 kg

Max Load

Material	High-strength aluminum alloy
Safety Features	Emergency Stop, Overload Protection, Safety Cage, Outriggers

Applications

Typical Applications

- Equipment Maintenance
- Paint Renovation
- Lighting Installation
- Cleaning Services
- Electrical Appliance Repair

Suitable Environments

Factories • Hotels • Restaurants • Railway Stations • Airports • Theaters • Galleries
