

Dual-Pivot Caliper Bicycle Brake

This caliper brake is designed for bicycles. It features a dual-pivot design for enhanced braking power and modulation.

Product Overview

Dual-Pivot Caliper Brake System

This dual-pivot caliper brake is engineered for reliable stopping power and precise modulation in diverse cycling conditions. Constructed from lightweight forged alloy, the design balances structural strength with weight efficiency. The system features adjustable linear spring tension and is compatible with most standard bicycle frames, making it a versatile choice for maintenance or upgrade projects.

Technical Specifications

Material	Forged Alloy
Adjustment Features	Dual Linear Spring Tension
Model Number	BK-707010

Performance & Compatibility

Performance Features

- Dual-pivot design for enhanced modulation
- Optimized for wet and dry conditions
- Includes all necessary installation hardware

Compatibility

Standard Frames • Standard Forks
