

# Dual Power Automatic Transfer Switch with Real-Time Monitoring

This device automatically switches between two power sources. It provides real-time monitoring of voltage and current, along with system status indicators and control options.

## Overview

### Dual Power Automatic Transfer Switch

This advanced power system monitoring device is engineered for reliable dual power switching applications. It features an integrated user interface that provides real-time monitoring of critical metrics such as voltage and current. Designed for seamless system control, it ensures optimal load management and operational continuity in demanding electrical environments.

## Technical Specifications

### Current Measurement

### Interface Features

- System Settings
- System Control
- Information Query
- Status Indicators

### Monitoring Capabilities

Real-time voltage monitoring, Real-time current monitoring, System status indication, Load monitoring

## System Status

### System Status

Normal • Active
