

Ducted Split-System Air Conditioner

This split-system air conditioner has a concealed indoor unit and outdoor units of varying capacities. The ducted indoor unit is designed for ceiling mounting, distributing conditioned air through ductwork for efficient cooling and heating.

Overview

High-Efficiency Ducted Climate Control

This ducted split-system air conditioner is engineered for residential and commercial environments where aesthetics and performance are equally critical. Designed for concealed ceiling installation, the indoor unit seamlessly integrates into your space while distributing conditioned air efficiently through ductwork. The robust outdoor condenser unit ensures reliable cooling and heating performance, featuring a durable, weatherproof housing built to withstand various environmental conditions.

Technical Specifications

System Type	Ducted Split-System
Installation	Concealed ceiling-mounted
Suitable Applications	Residential, Commercial, Office, Retail

Performance Features

Core Functions

Cooling • Heating • Air Distribution

Outdoor Unit Attributes

- Weatherproof housing
- High-efficiency compressor
- Integrated fan system
- Variable capacity options
