

Ductile Iron Pipe with Zinc-Aluminum Coating

Ductile iron pipe featuring a zinc-aluminum coating for corrosion resistance. This pipe has a T-type joint, a nominal diameter of DN500, and a length of 6000mm.

Product Overview

High-Performance Ductile Iron Piping

These centrifugal ductile iron pipes are engineered for durability and longevity in demanding infrastructure projects. Featuring an advanced zinc-aluminum alloy external coating, they offer superior corrosion resistance compared to traditional coatings. Designed to meet international standards, these pipes are suitable for a wide range of water and industrial applications.

Technical Specifications

Available Lengths

- 6 meters
- 8.15 meters

Nominal Diameter Range	DN80 - DN2600
External Coating	Zinc-Aluminum Alloy (400g/m ²)
Joint Type	T-type
Pressure Rating	28 kN/m

Compliance & Certification

Certifications	ISO 9001, ISO 14001, GB/T 28001, BV Certified, KS Certified
Standard Compliance	ISO 2531:2009
