

Ductile Iron Pipes for Water Processing

Large diameter ductile iron pipes are designed for water processing engineering applications. These pipes feature a black exterior coating and a red-primed interior.

Product Overview

High-Performance Ductile Iron Infrastructure

These ductile iron pipes are engineered for large-scale water processing and industrial infrastructure projects. With an extensive range of diameters and high-durability coatings, they provide reliable performance across diverse environmental conditions. The pipes are designed to handle demanding applications while maintaining industry-leading technical standards.

Technical Specifications

Available Lengths

- 6 meters
- 8.15 meters

Annual Capacity

38000 km

Annual Pipeline Production

Diameter Range (DN)

DN80 - DN2600mm

Certifications & Quality

Quality Compliance

International Standard Compliant • Occupational Health & Safety Certified • Environmental Management Certified

Certifications

ISO 9001, ISO 14001, GB/T 28001, BV Certified, KS Certified
