

E320B Turbocharger for Engine Power Enhancement

This turbocharger is a high-performance component designed for enhanced engine power and efficiency. It delivers increased boost pressure, resulting in significant gains in horsepower and torque.

Overview

High-Performance Turbocharger Solution

The E320B Turbocharger is a precision-engineered component designed to significantly enhance engine power and operational efficiency. Featuring a robust construction with optimized turbine and compressor wheels, it ensures superior airflow and reliability. This unit is specifically built to deliver increased boost pressure, resulting in tangible gains in both horsepower and torque for demanding applications.

Technical Specifications

Key Design Features

- Robust construction for durability
- Precision-engineered turbine wheel
- Precision-engineered compressor wheel
- Optimized housing for improved airflow

Application Compatibility

High Performance, Engine Enhancement, Improved Responsiveness
