

Earthmoving and Excavation Machinery

This heavy-duty machinery is designed for earthmoving, excavation, and compaction tasks. It is suitable for road construction, site preparation, and other heavy-duty applications.

Overview

Heavy-Duty Earthmoving Solution

This robust construction machinery is engineered for demanding tasks including earthmoving, excavation, and soil compaction. Featuring a heavy-duty chassis and a high-performance engine, it provides the power and reliability needed for large-scale site preparation and road construction projects. The integrated hydraulic system ensures efficient operation, while the operator cabin is designed to provide safety and ergonomic comfort during extended work shifts.

Technical Specifications

Key Features

- Robust chassis construction
- High-efficiency hydraulic systems
- Ergonomic operator cabin
- Heavy-duty engine performance

Model Identifier	XG6224M
Primary Applications	Road Construction, Site Preparation, Earthmoving, Excavation, Compaction
