

Edge Alignment Clamp

The edging clamp securely holds and aligns edges of materials during assembly or fabrication. Its robust clamping mechanism features adjustable jaws to accommodate various material thicknesses.

Product Overview

Precision Edge Alignment

The Edge Alignment Clamp is a specialized tool engineered for securely holding and aligning the edges of various materials during assembly and fabrication. Featuring a robust clamping mechanism with adjustable jaws, it accommodates a range of material thicknesses to ensure precise, professional results. Its ergonomic handle design prioritizes user comfort and ease of operation, making it an essential addition for woodworking, metalworking, and precise edge-joining applications.

Technical Specifications

Key Features

- Robust clamping mechanism
- Adjustable jaws
- Ergonomic handle
- High-precision alignment

Category

Hand Tools • Clamping & Workholding

Primary Applications

Woodworking, Metalworking, Assembly, Fabrication
