

EGR Injection Pipe

High-pressure injection pipe designed for Exhaust Gas Recirculation (EGR) systems. Manufactured from durable, corrosion-resistant steel, this pipe ensures reliable fuel delivery and optimal engine performance.

Product Overview

High-Performance EGR Injection Pipe

This high-pressure injection pipe is specifically designed for Exhaust Gas Recirculation (EGR) systems to support optimal engine performance. Manufactured from durable, corrosion-resistant steel, the component features precision-engineered bends and fittings to ensure secure connections and leak-free operation. It is built to provide reliable fuel delivery and efficient EGR functionality, contributing to reduced engine emissions.

Technical Specifications

Key Features

- High-pressure design
- Corrosion-resistant construction
- Precision-engineered bends
- Leak-free fittings

Material	Corrosion-resistant steel
System Application	Exhaust Gas Recirculation (EGR)

Compatibility

Compatibility	SINOTRUK Engine Series
