

Electric Ball Valve for Automated Flow Control

Electric ball valves provide automated control of fluid flow. The valves have metal bodies and electric actuators for reliable remote operation.

Product Overview

Automated Flow Control Solutions

This electric ball valve is engineered for precise, automated flow control in industrial fluid systems. Featuring a robust metal valve body and a reliable electric actuator, it enables seamless remote operation and integration into complex automation setups. Designed for durability and consistent performance, this valve is an ideal choice for streamlining fluid management processes.

Technical Specifications

Actuation Type	Electric
Valve Type	Ball Valve
Construction Material	Metal
