

Electric Bicycle Conversion Motor

This high-efficiency electric motor is suitable for electric bike conversions and replacements. It features a durable aluminum housing, precision-engineered rotor and stator for optimal performance, and a threaded shaft for secure attachment.

Overview

High-Efficiency E-Bike Motor

This high-efficiency electric motor is specifically designed for electric bike conversions and replacement applications. It features a durable aluminum housing and precision-engineered rotor and stator components to ensure optimal performance. Built for reliability, the motor offers quiet operation and a long service life, even in demanding riding conditions.

Technical Specifications

| | |
|------------------|-----------------------|
| Housing Material | Aluminum |
| Shaft Design | Threaded shaft |
| Connection Type | Pre-wired power cable |

Features

Primary Application

E-Bike Conversion • Replacement Part

Key Features

High Efficiency, Quiet Operation, Durable Construction, Easy Installation
