

Electric Bicycle DC Brushless Motor Controller

This DC brushless motor controller is designed for electric bicycles. It features multiple current ratings for different motor sizes and operating conditions.

Overview

Efficient Motor Control

This DC brushless motor controller is engineered specifically for electric bicycle applications, ensuring efficient and reliable power management. It features a versatile design that accommodates various motor sizes and operating conditions, making it suitable for a range of e-bike configurations. The unit is equipped with multiple integrated connectors, simplifying the installation process and ensuring seamless compatibility with standard electric bicycle systems.

Technical Specifications

System Integration

- Multiple current rating options
- Integrated standard connectors
- Compatible with various motor sizes

Performance Highlights

1 High

Efficiency Rating

Controller Type	DC Brushless Motor Controller
Primary Application	Electric Bicycles

Certifications & Standards

Compliance	DC Brushless, E-Bike Compatible
