

Electric Bicycle Rear Axle Assembly

Complete rear axle assembly designed for electric bicycles. It features integrated motor mounts and brake attachments.

Product Overview

Electric Bicycle Rear Axle Assembly

This complete rear axle assembly is specifically engineered for electric bicycle applications, offering a robust solution for power transfer and structural integrity. Featuring integrated motor mounts and dedicated brake attachments, it simplifies the integration process for e-bike manufacturers and repair specialists. The design includes precision hubs for wheel mounting and provisions for suspension systems, ensuring reliable performance and durability in demanding riding conditions.
