

Electric Bike Wheel Rim

This electric bike wheel rim is engineered for strength and lightweight performance. Its five-spoke design incorporates strategic cutouts to minimize weight while ensuring structural integrity.

Product Overview

High-Performance Electric Bike Rim

This high-performance electric bike wheel rim is engineered for optimal strength and lightweight construction, making it an ideal choice for demanding e-bike applications. Featuring a unique five-spoke design with strategically placed cutouts, the rim reduces rotational weight while maintaining superior structural integrity. Crafted from durable alloy and finished with a corrosion-resistant coating, it ensures long-lasting performance and reliability for both front and rear wheel configurations.

Technical Specifications

Compatibility

- Standard electric bike hub motors
- Front wheel application
- Rear wheel application

Material & Durability

Durable Alloy • Bending Resistant • Deformation Resistant

Performance Metrics

5 spokes

Spoke Count

Design Features

Five-spoke design, Lightweight construction, Precision-machined spoke holes, Corrosion-resistant coating
