

Electric Cargo Tricycle with Rear Bed

This electric cargo tricycle is designed for hauling goods and materials. It features a sturdy frame, a rear cargo bed with railing, and an electric motor for propulsion.

Overview

Efficient Cargo Transportation

This electric cargo tricycle is engineered for reliable hauling of goods and materials in various environments. It combines a sturdy, durable frame with an integrated electric motor and battery system, offering an eco-friendly and efficient solution for professional logistics. Equipped with safety features like a front headlight and side mirrors, this vehicle ensures operational security while the railed rear cargo bed provides stability for transported items.

Technical Specifications

Propulsion System	Electric Motor and Battery
Cargo Bed Configuration	Rear bed with metal railings

Safety & Design

Safety Features	Front Headlight, Side Mirrors, Railed Cargo Bed
Terrain Suitability	Durable tires designed for various road conditions
