

Electric Coolant Pump for Industrial Machinery

This electric coolant pump is designed for efficient fluid circulation in various industrial applications. It features a durable construction with a brass pump head and a robust electric motor, suitable for use with coolants, water, and other non-corrosive fluids.

Product Overview

Industrial Electric Coolant Pump

This electric coolant pump is engineered for efficient fluid circulation in diverse industrial machinery applications. Featuring a durable brass pump head and a robust electric motor, it is designed for reliability with coolants, water, and other non-corrosive fluids. Its compact design and integrated mounting bracket facilitate straightforward installation into existing systems.

Technical Specifications

Protection Class

IP 44

Insulation Class

Class F

Rated Voltage

220 V

Frequency

50 Hz

Power Consumption

0.06 KW

Rated Current

0.3 A

Maximum Pressure

0.02 MPa

Rotational Speed

2000 r/min

Key Features

Performance Highlights

0.06 KW

Power Output

2000 r/min

Speed

Installation Features

- Compact design for easy integration
- Threaded inlet and outlet ports
- Mounting bracket included

Construction Materials

Brass Pump Head, Electric Motor
