

Electric Diesel Fuel Pump Assembly

This electric diesel fuel pump assembly is designed to provide a long service life in diesel applications, up to 10,000 hours. It improves cold start performance and removes the need for manual exhaust in diesel engines.

Overview

High-Performance Diesel Fuel Pump Assembly

This electric diesel fuel pump assembly is engineered for demanding freight vehicle applications. Featuring a robust machined aluminum housing and integrated wiring harness, it ensures reliable fuel delivery and consistent system pressure. Designed for seamless integration into diesel fuel systems, this component provides the durability and precision required for heavy-duty automotive performance.

Technical Specifications

Component Type	Electric Diesel Fuel Pump Assembly
Housing Material	Machined Aluminum
Application Compatibility	Freight Vehicles, Diesel Fuel Systems

Features

Key Features

- Integrated electric pump unit
- Machined aluminum housing for heat dissipation
- Multiple ports and fittings for versatile installation
- Standardized wiring harness with secure connector
- Integrated bolt holes for secure mounting
