

Electric Fan Motor for Ventilation

This electric fan motor is suitable for air circulation and ventilation. It features a durable black housing with mounting brackets and a power cord for electrical connection.

Overview

High-Performance Ventilation Motor

This electric fan motor is engineered for reliable air circulation and ventilation in both household and industrial environments. It features a robust black housing and integrated mounting brackets to ensure secure installation and long-term durability. Designed for efficiency, this unit provides consistent performance for air circulator blade systems.

Electrical Specifications

Rated Voltage	208/230V
Rated Amperage	2 A
Frequency	60 Hz

Performance Metrics

Key Performance Metrics

Technical Details

Model Identification

- Model: ON543
- Part Number: CS2882

Insulation Class

Class B
