

Electric Heated Towel Radiator

This electric heated towel radiator is constructed from low carbon or mild steel. It features a white powder coating and a smart control system for temperature regulation and energy saving.

Product Overview

Smart Electric Towel Radiator

This electric heating smart towel radiator is crafted from high-quality low carbon steel or mild steel, finished with a durable white powder coating. It is specifically engineered for efficient towel warming and rapid drying in residential or commercial settings. Featuring an integrated smart control system, it allows for precise temperature regulation and optimized energy efficiency.

Technical Specifications

Material	Low Carbon Steel, Mild Steel
Surface Finish	White Powder Coating
Heating System	Electric Heating

Features

Smart Capabilities

- Integrated Smart Control System
- Precise Temperature Regulation
- Energy Saving Operation

Applications

Suitable Environments

Bathroom • Laundry Room
