Product Overview

High-Performance Electric Lifting Winch

The JL series electric lifting winch is engineered for durability and efficiency, featuring a high-strength aluminum alloy construction with an anodized finish for superior heat dissipation. Designed for versatile industrial and agricultural applications, this unit incorporates a closed gear oil lubrication system that ensures low noise, minimal wear, and reduced transmission loss. With an integrated digital display for real-time monitoring, this winch provides the precision and safety required for demanding construction, freight, and catering environments.

Technical Specifications

Key Operational Benefits

- Low noise operation
- Low wear design
- Low transmission loss
- Excellent heat dissipation
- Integrated digital display

Construction Material	High-strength aluminum alloy with anodized surface treatment
Lubrication Type	Closed gear oil lubrication

Applications

Usage Versatility

Standalone Winch • Small Crane Integration

Suitable Industries	Construction, Agriculture, Industrial, Freight Elevator, Catering
