

# Electric Moped Sealed Lead-Acid Battery

Sealed lead-acid batteries designed for electric mopeds and similar applications. These batteries provide reliable power for electric vehicles, offering a maintenance-free operation and long service life.

## Product Overview

### Reliable Power for Electric Mobility

These sealed lead-acid batteries are specifically engineered for electric mopeds and scooters, offering a maintenance-free solution for daily transportation. Designed for demanding environments, they provide high energy density and deep cycle capability to ensure consistent performance. With stable discharge voltage and efficient charge acceptance, these batteries deliver reliable power and long service life for various electric mobility applications.

## Technical Specifications

Available Models	6-DZM-17, 6-DZM-20
Battery Chemistry	Sealed Lead-Acid (SLA)

## Performance Features

### Key Performance Indicators

**1 Free**

Maintenance

**100 %**

Sealing Performance

### Charging Characteristics

- Fast charge acceptance
- Stable discharge voltage
- Energy saving capacity recovery

## Application

### Primary Applications

Electric Mopeds • Electric Scooters • E-bikes
