

Electric Motor Carbon Brush Set

Assorted carbon brushes designed for electric motors are essential for transferring electrical current. The assortment includes different sizes and configurations to fit a range of power tools and appliances.

Overview

High-Performance Carbon Brush Assortment

This comprehensive set of carbon brushes is engineered for reliable electrical current transfer in rotating armatures and rotors. Constructed from premium-grade carbon materials, these brushes offer superior conductivity and durability, ensuring minimal wear on your equipment's commutator. The assortment features various sizes and configurations, making it a versatile solution for maintenance and repair of diverse power tools and appliances.

Technical Specifications

Primary Function	Transferring electrical current to rotating armatures or rotors
Material Composition	High-quality carbon
Connection Features	Copper wire leads, Secure terminal connections

Compatibility

Suitable Applications

- Electric drills
- Grinders
- Saws
- General power tools
- Various appliances

Sizing	Includes assorted sizes and configurations to fit a wide range of equipment
