

Electric Motor Stator Assembly with Finned Housing

Electric motor stator assembly designed for efficient operation. It features a finned aluminum housing, internal circuit board, and plastic ring.

Product Overview

High-Performance Motor Stator Assembly

This electric motor stator assembly is engineered for demanding industrial applications requiring reliable thermal management and precise control. Featuring a robust finned aluminum housing, it ensures efficient heat dissipation during operation. The unit includes an integrated circuit board and a specialized white plastic ring interface, making it a comprehensive solution for motor integration.

Technical Specifications

Cooling Design

Finned Housing • Passive Heat Dissipation

Integrated Components

- Stator Assembly
- Internal Circuit Board
- Plastic Interface Ring
- Wiring Harness
- Power/Control Connector

Part Number

386-0595-1

Housing Material

Aluminum
