

Electric Motor with Cooling Fins

This electric motor is suitable for various power tools and industrial applications. It features a metallic housing with cooling fins, a terminal box for connections, and a capacitor.

Product Overview

Robust Industrial Electric Motor

This electric motor is engineered for durability and reliable performance in demanding environments. Featuring a robust metallic housing integrated with cooling fins, it ensures efficient heat dissipation during operation. The unit is equipped with a dedicated terminal box for secure electrical connections and includes a capacitor to optimize starting and running efficiency.

Technical Specifications

Included Components

- Terminal box
- Capacitor

Cooling System	Integrated cooling fins
Housing Material	Metallic
Application Suitability	Power Tools, Industrial Machinery
