

Electric Power Plant

This electric power plant is designed for efficient energy production. It includes a main power generation building, cooling towers, and auxiliary buildings.

Overview

Electric Power Plant Infrastructure

This electric power plant facility is designed for large-scale energy production and distribution. The site layout integrates primary generation buildings, cooling infrastructure, and essential auxiliary support systems. It is engineered to provide a comprehensive solution for industrial energy needs within an open-space environment.

Facility Details

Key Infrastructure

- Main power generation building
- Cooling towers
- Chimney stack
- Control rooms
- Administrative offices
- Maintenance facilities
