

Electric Reciprocating Saw

The reciprocating saw is a powerful electric tool designed for cutting through various materials, including wood, metal, and plastic. Its inline motor and ergonomic handle provide balance and control.

Product Overview

Professional Electric Reciprocating Saw

This powerful electric reciprocating saw is engineered for versatility and control across various materials including wood, metal, and plastic. Designed with an inline motor and ergonomic handle, it ensures optimal balance during demanding cutting tasks. The inclusion of variable speed settings and a quick-release blade system makes it a highly efficient choice for demolition and remodeling projects.

Technical Specifications

Core Features

- Inline motor design
- Quick-release blade change system
- Variable speed control
- Ergonomic handle

Compatible Materials	Wood, Metal, Plastic
-----------------------------	----------------------

Application

Typical Applications

Demolition • Remodeling • General Cutting

Construction

Durability Rating	Rugged construction for demanding job site conditions
