

Electric Starter Motor

This electric starter motor is designed for robust and reliable engine starting. It features a durable solenoid and gear reduction system for efficient torque delivery.

Product Overview

High-Performance Starting Solution

The ZT76-390 electric starter motor is a robust component engineered for reliable engine ignition across various industrial applications. It features an advanced gear reduction system combined with a high-durability solenoid to ensure efficient torque delivery. Built with precision manufacturing standards, this motor is designed to provide consistent starting power even under demanding operating conditions, offering an extended service life for professional equipment.

Technical Specifications

Model Number	ZT76-390
Core Features	High Performance, Gear Reduction, Robust Solenoid, Precision Engineering
