HCD80 Electric Tamping Rammer

The HCD80 electric tamping rammer is a professional-grade compaction tool engineered for efficiency in confined construction environments. Designed with a focus on operator safety and reliability, this machine offers high production capacity for soil, gravel, and asphalt compaction. Its compact, lightweight architecture ensures maneuverability while maintaining the robust force necessary for bridge foundation work, road construction, and housing site preparation.

Key Features

Performance Advantages

- Compact and lightweight design for easy handling
- High production efficiency in compaction tasks
- Superior wet performance
- Flexible and reliable operation
- Enhanced safety features for site use

Applications

Best For

Road Construction, Bridge Foundations, Housing Construction, Trench Compaction

Technical Specifications

Robust design suitable for intensive compaction on construction sites.

Model Number

HCD80

Power Source

Electric
