Product Overview

High-Performance Electric Torque Wrench

The PD2 series electric torque wrench is a specialized power tool designed for precise tightening and loosening of bolts and nuts. Featuring a robust motor and gearbox, it delivers high torque output for demanding industrial and construction applications. The integrated electronic control system allows users to accurately set and maintain desired torque levels, ensuring consistent and reliable fastening while preventing over-tightening.

Technical Specifications

Controllable Torque Range

2500 N.m

Max Torque

Power Requirements

Metric	Value
Voltage	220V
Max Power Consumption	1900W

Included Accessories

- Standard sleeve: 27TM-55TR

Application & Usage

Suitable Industries

Construction, Manufacturing, Industrial Maintenance
