

Electric Tubular Motor for Roller Shutters

Electric tubular motors are designed to be integrated into roller shutters and awnings. The cylindrical shape allows concealment within the roller tube, providing automated operation via remote or switch.

Product Overview

Versatile Automation Solution

This electric tubular motor is a professional-grade drive unit specifically designed for seamless integration into roller shutters and awnings. Its compact, cylindrical design allows for discreet installation within the roller tube, ensuring a clean aesthetic while providing reliable automated operation. The system features advanced safety components including thermal overload protection and adjustable limit switches for precise positioning control.

Technical Specifications

Key Performance Metrics

100 %
Operational Efficiency

Control Methods

- Remote Control
- Switch Activation

Feature Highlights

Thermal Overload Protection, Adjustable Limit Switches, Quiet Operation, Compact Design

Applications

Compatible Applications

- Roller Shutters
- Awnings
- Housing Integrated Systems
