

Electric Vehicle Power Battery

High-performance power battery designed for electric vehicles. It provides reliable and efficient power for optimal performance.

Product Overview

Next-Generation EV Power Battery

This high-performance power battery is engineered specifically for electric vehicles, focusing on environmental sustainability and reliable energy output. Featuring an advanced cathode formula and optimized gate design, it delivers excellent large current discharge capabilities and extended service life. Designed for maximum efficiency, this battery minimizes self-discharge and eliminates the need for water maintenance, making it an ideal solution for demanding electric mobility applications.

Technical Specifications

Available Models

Model Identifier
6-DZM-15
6-DZM-17
6-DZM-20

Design Features

- New positive and negative gate design
- Advanced cathode formula
- Maintenance-free (no water required)
- Low internal resistance

Performance Characteristics

Key Performance Attributes	High Capacity, Low Self-Discharge, Long Service Life, High Current Discharge, Eco-Friendly
