

Electric Water Heater Booster Pump

This electric pump boosts water pressure for water heaters with insufficient pressure. It is designed for water circulation in domestic, heating, and industrial applications.

Product Overview

High-Efficiency Booster Pump

This electric booster pump is specifically engineered to address insufficient water pressure in water heater systems. Designed for reliability and durability, it features a robust construction suitable for both domestic and industrial applications. The unit ensures consistent water circulation, providing a quiet and efficient solution for optimizing your water pressure infrastructure.

Technical Specifications

Max Liquid Temperature	50
Protection Class	IP54
Insulation Class	B

Materials

Pump Body Material	Stainless Steel or Aluminum
Impeller Material	Brass
Shaft Material	Stainless Steel

Compliance & Standards

Certifications	GS, CE, RoHS
----------------	--------------
