

Electric Water Pump

This electric pump is designed for water circulation and pressure boosting. Its durable construction and powerful motor ensure reliable performance for industrial and domestic applications.

Overview

Robust and Efficient Pumping Solution

The DB Series Electric Pump is a high-performance solution designed for reliable water circulation and pressure boosting. Featuring a durable construction and a powerful electric motor, it is engineered for both industrial and domestic applications. Its compact design ensures easy installation and low-maintenance operation in various settings.

Technical Details

Series	DB Series
Power Source	Electric Motor

Applications

Primary Uses	Water Circulation, Pressure Boosting, Industrial Use, Domestic Use
--------------	--

Design & Installation

Key Features

- Robust construction
- Compact design
- Easy installation
- Simplified maintenance

Performance

Performance Benefits

Powerful Motor • Efficient Operation • Reliable Performance
