

Electric Water Pump

This electric pump is engineered for diverse applications. It delivers consistent pressure and flow rate for reliable water transfer.

Overview

High-Performance Electric Water Pump

The AUJET Series electric pump is engineered for high-performance fluid transfer and reliable operation across diverse environments. Designed with a robust construction and an efficient motor, this unit ensures consistent pressure and flow rates for demanding tasks. It is an ideal solution for applications ranging from residential water boosting and irrigation to general industrial water transfer.

Applications

Suitable Applications

Water Boosting, Irrigation, General Water Transfer

Key Features

Design Highlights

- Robust construction for durability
- Efficient motor design
- Consistent pressure output
- Reliable flow rate management
- Long-lasting operational life
