

Electric Windlass Mooring Winch

This equipment is designed for both anchoring and mooring operations. It features an electric motor that drives a winch drum for mooring lines and a chain wheel for anchor chain handling.

Product Overview

Versatile Marine Deck Equipment

The Combined Electric Windlass and Mooring Winch is engineered for optimal performance in both anchoring and mooring operations. This space-saving design integrates a powerful electric motor with a robust winch drum and a dedicated chain wheel for efficient chain handling. Built with durable materials, it is specifically constructed to withstand harsh maritime environments and handle demanding loads reliably.

Technical Specifications

Available Models	DMB-17.5, DMB-50
Power System	Electric Motor

Key Features

Operational Capabilities

- Combined anchoring and mooring functionality
- Space-saving deck design
- Durable marine-grade construction
- Integrated precision controls
- Enhanced safety mechanisms
