

Electric Wood Router for Shaping and Grooving

This electric router is a versatile power tool for woodworking and other materials. It features a robust motor, adjustable cutting depth, and ergonomic handles for precise control.

Product Overview

High-Performance Electric Wood Router

This professional-grade electric router is designed for precision woodworking, including shaping edges, creating clean grooves, and executing intricate designs. Engineered with a robust 1850W motor, it offers the power necessary for demanding tasks while maintaining consistent performance. The tool features adjustable cutting depth and ergonomic handles to ensure operator comfort and precise control during operation.

Technical Specifications

Power Rating	1850 W
Rated Voltage	220V~
Rated Current	7.7 A
Frequency	50-60Hz

Performance Metrics

No-Load Speed

9000 min⁻¹
Minimum Speed

23000 min⁻¹
Maximum Speed

Features

Key Features

- Adjustable cutting depth
- Ergonomic handle design
- High-torque motor for shaping and grooving
- Versatile application range
