

Electric Wood Router with Adjustable Depth

This electric power tool features a robust motor housed in a gray casing with black accents. It is equipped with adjustable depth settings, controlled by knobs and levers, and metal guide rods provide stability and precision.

Overview

Precision Woodworking Performance

This electric wood router is engineered for precision shaping and woodworking tasks. Featuring a robust motor and a durable housing, it provides the reliability needed for professional applications. The clear plastic base ensures excellent visibility of the workpiece, while the adjustable depth settings and metal guide rods allow for consistent, accurate results.
