

Electric Wood Router with Adjustable Handles

This power tool is an electric router designed for woodworking and similar applications. It features adjustable handles for precise control and depth adjustment mechanisms for accurate cutting.

Overview

High-Performance Electric Wood Router

This professional-grade electric wood router is engineered for precision woodworking tasks including edge profiling, grooving, and decorative cutting. Designed for accuracy and control, it features adjustable handles and a reliable depth adjustment mechanism. Built to meet rigorous international quality and safety standards, this tool is a dependable choice for demanding workshop environments.

Technical Specifications

Key Features

- Adjustable handles for ergonomic control
- Precision depth adjustment mechanism
- Robust motor housing
- Suitable for grooving and edge profiling

Performance Metrics

1020 W

Power Output

23000 RPM

Max Speed

Power Input	1020 W
Voltage/Frequency	220V-50Hz
No-Load Speed	23000 r/min
Cutting Depth Capacity	0-30mm
