

Electrical Chemical Material

This is an electrical chemical material. It is used in geological exploration equipment and instruments.

Product Overview

High-Performance Chemical Compound

This electrical chemical material is a specialized polymer compound designed for industrial applications. Supplied in standard 25kg packaging, it is engineered for consistent performance and reliability in demanding environments. Its chemical properties make it particularly suitable for use in advanced geological exploration equipment and precision instrumentation.

Technical Specifications

Material Type	Plastic Resin / Polymer Compound
Model Identifier	SR050
Composition	MBS, Plastic Resin

Logistics & Packaging

Net Weight	25 kg
Packaging Type	Industrial Bag
