

Electrical Discharge Machine for Plastic and Rubber

This electrical discharge machine precisely cuts and shapes materials. It is ideal for manufacturing complex parts and molds in the plastic and rubber industries, featuring a robust frame, advanced control panel, and integrated cooling system.

Overview

Precision EDM Technology

This Electrical Discharge Machine is engineered specifically for the precise cutting and shaping of plastic and rubber materials. It features a robust, industrial-grade frame and an advanced control interface to ensure high-accuracy manufacturing of complex parts and molds. The integrated cooling system maintains optimal operating temperatures, making it a reliable solution for demanding production environments.

Technical Specifications

Key Features

- Robust structural frame
- Advanced digital control panel
- Integrated cooling system
- High-precision EDM cutting

Model Number	OMC550
Series Identifier	TLN-20
Suitable Industries	Plastic Manufacturing, Rubber Processing, Mold Making
