

# Electrical Panel Components

Metallic components are used for electrical panels and cabinets. They provide electrical safety and protection for internal components and can be used for assembly, repair, or modification.

## Product Overview

### Professional Electrical Panel Components

These high-quality metallic components are designed specifically for electrical panel and cabinet applications. Featuring a durable metallic construction, they provide essential grounding and shielding capabilities to ensure safety and protection for sensitive internal electronics. This versatile collection is suitable for both new assembly projects and the repair or modification of existing electrical enclosures.

## Physical Properties

### Component Types

- Cylindrical pellets
- Irregularly shaped fragments

### Material Composition

Metallic, Steel/Aluminum Alloy

## Application

### Primary Application

Electrical Enclosures • Grounding • Shielding

### Usage Scenarios

- Panel Assembly
- Equipment Repair
- Cabinet Modification
