

Electrical Parameter Measurement Instruments

These electrical measurement instruments are used to monitor and measure electrical parameters in various applications. They are designed for industrial or laboratory use.

Product Overview

Precision Electrical Measurement

These electrical parameter measurement instruments are engineered for high-accuracy monitoring in industrial and laboratory environments. Designed to track critical metrics such as current and energy consumption, they provide reliable data for system diagnostics and operational efficiency. The collection includes specialized units for milliamp and kilowatt-hour measurements, ensuring versatility across various electrical applications.

Technical Specifications

Model Series

- HOXM
- HEGN
- HOGH
- SIC777
- 42L6

Measurement Types

Kilowatt-hour, Milliamp, Ammeter

Accuracy Class

0.2

Performance Metrics

Measurement Ranges

50 A Range Low	150 A Range Mid	200 A Range High
--------------------------	---------------------------	----------------------------

Compliance Status

Industrial Grade • Lab Tested
