

# Electrical Wire Extrusion Machine

This electrical wire extrusion machine is designed for manufacturing electrical wires. It features a control panel, material hopper, extrusion die, and cooling system.

## Overview

### High-Precision Extrusion Solution

This 70mm Extruder Machine is engineered specifically for efficient electrical wire manufacturing. It incorporates advanced process control, including a dedicated control panel with digital temperature monitoring and a continuous material feeding system. Designed for reliability, the machine ensures consistent wire shaping through its precision extrusion die and integrated cooling system.

## Technical Specifications

### Key Components

- Material Hopper
- Extrusion Die
- Cooling System
- Control Panel

Screw Diameter	70 mm
Control Features	Digital Temperature Controllers, Precision Process Monitoring, Continuous Feeding

## Performance Metrics

### Key Operational Metrics

**70 mm**

Extruder Diameter
