

Electrical Wires and Cables

These wires and cables are designed for electrical power transmission and various wiring applications. The products include insulated single-core wires and multi-core cables with shielding options.

Product Overview

Professional Grade Electrical Cabling

These electrical wires and cables are engineered for reliable power transmission and versatile wiring applications in diverse environments. The range includes both single-core insulated wires in multiple color-coded options and robust multi-core cables, available in both shielded and unshielded configurations. Designed for durability and performance, these solutions ensure efficient electrical connectivity for industrial, commercial, and residential projects.

Technical Specifications

Available Cable Types

- Single-core wires
- Multi-core cables
- Shielded cables
- Unshielded cables

Protection Features

Flexible Conduit • Insulated

Conductor Material

Copper

Insulation Colors

Blue, Light Blue, Yellow, Red

Applications

Primary Applications

- Electrical power transmission
- General wiring applications
- Industrial electrical infrastructure
